

Feed Glycerine

Subject to Availability

Suitable for feeding:

Feed Glycerine is a light coloured, odourless, sweet tasting, **energy dense liquid** that is a by-product of biofuel production using vegetable oils.

Glycerine can help **improve energy supply** to high yielding dairy cows and have a **positive impact on health and performance** during their entire lactation.

Typical Analysis (DM Basis)

	Solids (%)	Sugars (%)	Protein (%)	ME (MJ/Kg)
Great Britain	86	80 min	11.6	15

Physical Properties

	Litres (per tonne)	Viscosity (cps/20°C)
	794	500-1500

Please seek nutritional advice to determine the best feeding rates for these liquids.

? DID YOU KNOW?

Researchers have determined that the net energy value of glycerine in sheep, steers and dairy cows was equal to or greater than that of Corn grain.
